

Serial No. 09/756,453  
Docket ADO 0069 PA

Please amend claims 15 and 17 as follows:

Sub C4  
B1  
15.(Amended) In combination, a heat activated expandable sealant and a flow control agent on at least a portion of said sealant, said combination adapted to seal a gap or cavity in a component; wherein said heat activated expandable sealant and said flow control agent melt and flow upon heating to a temperature sufficient to cause said sealant and flow control agent to flow; and wherein said heat activated expandable sealant has a melt flow rate which is higher than the melt flow rate of said flow control agent.

B2  
Sub C4  
17.(Amended) The combination of claim 15 wherein said flow control agent comprises polyvinyl acetate.

Please add new claims 21-25 as follows:

Sub C4  
B3  
21.(New) The combination of claim 15 wherein said heat activated expandable sealant and said flow control agent melt when heated to a temperature between about 250°F to 400°F.

22. (New) The combination of claim 15 wherein said heat activated expandable sealant includes a blowing agent.

23.(New) The combination of claim 15 wherein said flow control agent is in the form of a mesh or film.

24.(New) The combination of claim 15 wherein said flow control agent is in the form of a dry coating.
